## Symbols and signal words

**CAUTION**

Potential hazard situations that can cause minor or moderate personal injury if the safety instruction is not observed.

**WARNING**

Potential hazard situation which can cause serious personal injury or death if the safety instruction is not observed.

- Handling
- List

! Important note(s), explanation(s) and information which you must take into consideration.

## Safety instructions

Carefully read through all the safety instructions before starting any tests.

**WARNING**

Repairs must be made by a qualified mechanic with specific knowledge of the system.

Carefully follow the installation instructions on the next pages!

Secure the vehicle against rolling away.

Attach a warning note on the steering wheel indicating that repair work is being performed on the vehicle.

Follow all specifications and instructions of the Vehicle Manufacturer.

Comply with the company and national accident prevention/health & safety regulations.

Wear any necessary protective clothing.

Initial spring tension! Do not open the spring actuator housing!

**CAUTION**

Only start repair work after you have read and understood all information required for repair.

It is absolutely essential that you follow the installation instructions in this brochure while performing adaptation work on the Universal-Tristop® Cylinder.

## Additional documents required

The documents are available on the WABCO website <http://www.wabco-auto.com> - simply enter the document title or document number in INFORM.

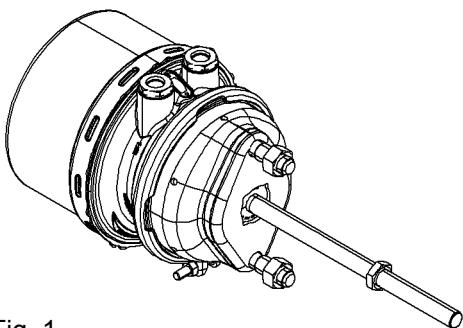

Fig. 1

Fig. 2

### 1. Universal Tristop® Cylinder

Automotive manufacturing demands short assembly times, therefore every vehicle model has its own Tristop® Cylinder which can be installed without any need for adaption. To answer the needs of all the vehicle WABCO supplies about 1500 different variants of the cam brake type alone.

WABCO also offers the Universal type Tristop® Cylinder which simplifies warehousing & enables a qualified mechanic to make the necessary changes to the springbrake. This demonstrates that keeping stock of Universal Tristop® Cylinders permits most repairs to be completed quickly, saving the need for holding a large stock of the parts and also ensuring that customers needs are met without delay.

### ! 2. What needs to be considered?

- To obtain the braking performance as specified in the brake ratings, use the same model size of WABCO Tristop® Cylinder as the one originally installed by the vehicle manufacturer.

The tables in this document will help you find the correct universal type. Go down the first column to find the original part number (See type plate corresponding with fig. 2). In the third column you will find the Universal Tristop Cylinder.

### ! 3. Replacements need to be correct with regard to the following points:

- Position of the clamp band
- Position of the threaded ports
- Position of the respiration tube
- Position of the drain port
- Length of piston rod etc.

Check these points and compare the broken original with the universal type. To make any adaptations as necessary, follow the instructions on the next pages.

The piston rod of a universal cylinder which has bellows sealing must not be shortened too much this avoids the bellows being damaged during operation. Leave a minimum gap of 82 mm between the flange surface and the centre of the yoke bore hole.

IBV- Tristop® Cylinders feature an Internal Breather Valve instead of an external respiration tube.

Original equipment cylinders with external tube can be replaced with IBV models.

## Procedure

### 1. Manually detach the cylinder from the vehicle

- Turn the releasing screw counter clockwise all the way towards the "Release" mark (see fig. 3).

### 2. Removing a Tristop® Cylinder

- Relieve all pressure from the lines (set hand brake).
- Loosen the ports and yoke.
- Remove fastening nuts.
- Remove Tristop® Cylinder

**CAUTION** Danger of injury.

Secure the cylinder to prevent it from rolling and dropping off the workbench.

### 3. Adapting a Tristop® Cylinder

- a = Position of clamp band.
- b = Position of the threaded ports
- c = Position of respiration tube (not required for IBV models).
- d = Length of piston rod
- e = Position of the drain port

(see fig. 4).

! When changing the position of a cylinder cover relative to the cylinder, the following must be observed:

- Relieve diaphragm, for this purpose withdraw piston rod approx. 3-5 mm and hold using suitable equipment (e.g. tube, washer and hexagon nut (see fig. 5)).

! Avoid damage to bellows. Tube must fit over bellows.

- Remove clamp band.
- Lift cylinder cover.
- When changing position of clamp band opening, align diaphragm accordingly.

! Clamp band opening should again correspond with the indentations on the diaphragm from the original position.

- Replace cylinder cover at the correct position.

! Diaphragm must not be subjected to distortions.

- Do not use substances containing grease or oil on the diaphragm because this may cause permanent damage.

- Use a hand-lever press to lightly press the cylinder cover against the cylinder so that the clamp band can be mounted in the correct position.

! To avoid damage to the cylinder, use suitable equipment. The clamp band must not be used to press the cover and cylinder together.

- Align the clamp band with the help of a plastic hammer.

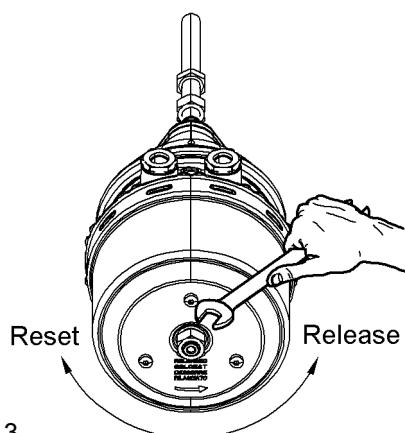

Fig. 3

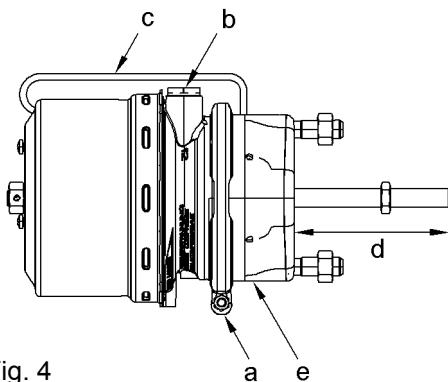

Fig. 4

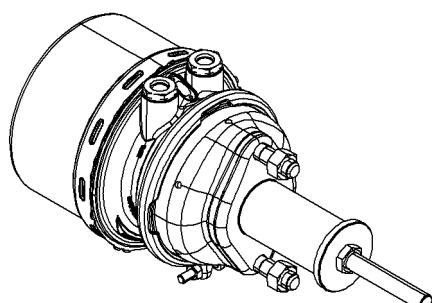

Fig. 5

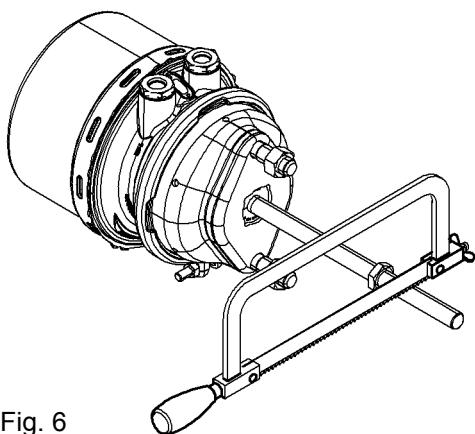

Fig. 6

- !** Check for smooth placement of the diaphragm.  
Clamp band and cover should have a uniform gap width.
- For initial assembly, tighten the hexagon screw with a tightening torque of  $M = 25.5 \pm 2.5 \text{ Nm}$ .
  - After the leak test, check the tightening torque  $M \geq 14 \text{ Nm}$ .
  - Cut the piston rod to correct length (see fig. 6).
- !** Do not clamp the cylinder in a vice.  
In the lower section between  $90^\circ - 270^\circ$  the drain ports must remain open.  
Sealing plugs are not required.

#### 4. Installing a Tristop® Cylinder

- !** Install according to the Vehicle Manufacturers instructions.  
Do not use spring wash washers.
- Check the mounting bracket on the axle for cracks.
- !** If any cracks are found, replace the bracket in accordance to the Vehicle Manufacturer's specifications.
- Put on the new Tristop® Cylinder.
  - Tighten fastening nuts with a tightening torque of  $M = 210 - 30 \text{ Nm}$ .
  - Attach yoke to slack adjuster using a bolt and splint.
  - Connect line to port 12.
- !** Charge spring brake cylinder (port 12) and check for tightness, ensure that no air escapes from port 11.
- Connect line to port 11.
  - Screw down release screw all the way (towards Reset mark) and tighten at  $M = 25 + 20 \text{ Nm}$ .

#### 5. Testing

- Actuate the Tristop® Cylinder (hand brake and service brake) several times and check for leaks, especially at the connectors and the entire circumference of the clamp band.
- Check deflection of the piston rod, a 3 deflection relative to the mid axis of the cylinder in every direction must not be exceeded.

Following installation, the respiration tube must be positioned above the device centre at both the spring-type brake actuators and the service brake unit.

The open drain port must point downwards (item e of fig. 4). The Tristop® Cylinder flange must rest flat on the mounting bracket. Be sure there is no washer between the bracket and the cylinder.

- Check the length of the piston rod. The length of the piston rod is correct if the slack adjuster is at the  $90^\circ$  position after half of the max. stroke (fig. 7).

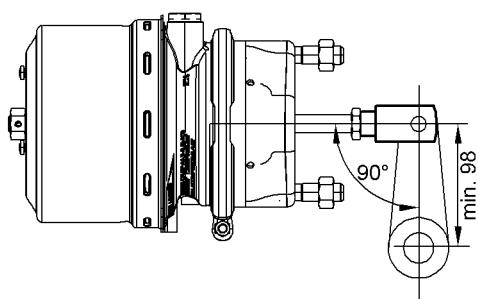

Fig. 7

# Universal Tristop® Cylinder for Cam Brakes

3

**!** The piston of the Tristop® Cylinder must be retracted completely while the brake is not actuated and must not be preloaded.

- An effectiveness test must be performed on a roller brake test rig.

**!** Replace all Tristop® Cylinders of the same axle together!  
If the cylinders are older, the spring forces of the spring-loaded portion may weaken, with uneven brake action as a result.
